Safety Data Sheet (SDS) – Request Note

Galvanized steel framing products

How to obtain the manufacturer’s safety data sheet for the material you buy from us.

Do framing members need an SDS?

Formed steel members such as studs, track and channels are generally treated as articles under the OSHA Hazard Communication Standard (29 CFR 1910.1200) because they do not release hazardous substances in normal use. Many contractors and owners still require the SDS for their safety files and for activities such as welding, torch cutting or grinding, which can produce metal fumes (for galvanized steel, zinc oxide fume).

What we provide

- The steel manufacturer’s current SDS for galvanized steel sheet and formed products, as a PDF by email.
- For prepainted coil and sheet: the SDS of the coated product, where the manufacturer issues one.
- We do not author SDS documents ourselves; the sheet you receive is the manufacturer’s document.

Request

Email the form below to info@nordic-umsmetal.com or use the request button in our document library. We send SDS documents within 1 business day.
